

THE GOAL WAS TO BRING A GLIDER WITH A PERFORMANCE LEVEL WHICH IS UTILIZABLE IN ALL PHASES OF THE FLIGHT.

The pilot will remain in total harmony with his/her wing and that will allow her or him to use the wing's full potential.

**BUT ONE SHOULD RATHER TEST IT,
NOT READ PAGES ABOUT IT!**

ANAKIS 2 is the successor of the first generation of this well known and popular entry level EN-B glider. The "founding father" was brilliant and the successor must be even better and that made the task extremely difficult. The goal was not to increase the speed, improve the glide ratio, we did not push the R&D team and test pilots for faster glider to improve the technical data sheet. The improvements of ANAKIS 2 lie in the improved efficiency, homogeneity, complexity and pleasure

which pilots experience when ANAKIS 2 glides gently into the turbulent air, nicely and comfortably turns and cores the thermals. No need to mention that the handling remained excellent and still very unique and typical for SKY gliders. We wanted either the wing to allow the pilot to move forward and improve her/his skills or to understand better the air mass to avoid stress and have fun in during occasional flights.

Materials used

ANAKIS 2, like all the other SKY products, is manufactured with state of arts technologies, such as CNC cutting devices and automatized line cutting to ensure the best quality.

Also the materials we use are the best materials available: DOMINICO Textiles for ribs, upper and bottom panels, EDELRID and LIROS for lines, PEGUET for quick links and MOUKA for riser straps.

The manufacturing facility is located in EUROPE, in the Czech republic, and the manufacturing process is ISO certified.

Key features

- High precision turns and handling
- Safety feeling
- Progressive and precise brake handling
- Excellent glide ratio at maximal speed
- Very easy take-off
- Performance
- High level of passive safety
- Low weight (4,45 kg M size)
- State of arts manufacturing and high quality

Colour variants

Tricolori

Bafana Bafana

Azzuri

Canaleros

ANAKIS 2 is targeted for pilots:

- Who wish to become independent. It's the wing of the first thermal and cross country flights.
- Looking for a simple, easy and fun to fly glider. Pilots who would like to fly relaxed and focus only on the flight.
- Looking for a versatile wing for hiking, daily flights and performance.

ANAKIS 2 is EN B and LTF-B certified wing. ANAKIS 2 aspect ratio is limited in order to provide good homogeneity and excellent behavior. ANAKIS 2 will make you feel comfortable with safe feelings and more than absolute performance.

Anakis 2	S	M	L	XL
Layout surface	23.20	25.10	26.80	29.00
Layout span	10.72	11.15	11.52	11.98
Layout aspect ratio	4.95	4.95	4.95	4.95
Projected surface	20.57	22.25	23.77	25.71
Projected span	8.86	9.22	9.52	9.90
Projected aspect ratio	3.82	3.82	3.82	3.82
Number of cells	46	46	46	46
Take-off load (kg)	58-80	73-95	90-110	103-130
Weight of the glider (kg)	4.2	4.45	4.7	4.95
Trim speed (km/h)	37	37	37	37
Min. speed	23	23	23	23
Max. speed	50	50	50	50
Gliding ratio	> 8.5	> 8.5	> 8.5	> 8.5
Min. sink rate	< 1.15	< 1.15	< 1.15	< 1.15
Certification	EN B / LTF B			

R&D team comments

This category of gliders is for SKY PARAGLIDERS one of the most important. In commercial terms of course because it's in the core of our market, but as well because we love gliders dedicated to most common pilots. Because it's the one you will used for your first experience and first feeling could be so strong... It's as well the gliders used by most of us who are not expecting after record but who only like to enjoy.

We like to show with ANAKIS 2 that it's possible to create a safe, reasonable and easy glider, but as well 100 % enjoyment and fun.

Good flights
